

Common USB Keyboard and Mouse Issues

No.	Common issue	Possible solution
1	Keyboard or mouse is not working	Unplug the USB device and connect it again to another USB port.
2	USD device is not detected	Restart the laptop and check if the device is detected after reconnecting it.
3	Keyboard keys or mouse movement are not responding properly	Clean the device and check if it works correctly after reconnecting it.
4	USB connection keeps disconnecting	Try a different USB port ad check whether the cable is damaged.
5	Wireless keyboard or mouse is not responding	Check the batteries and reconnect the wireless receiver to the USB port.

Bluetooth Headphones Troubleshooting

Step 1 – Check Bluetooth

First, I would open the phone settings and make sure Bluetooth is turned on.

Step 2 – Check Headphones

I would make sure the headphones are switched on and have enough battery.

Step 3 – Check Pairing Mode

I would put the headphones into pairing mode and check if their name appears in the Bluetooth device list.

Step 4 – Check the Connection

If the headphones are already connected to another device, I would disconnect them from that device and try again.

Step 5 – Forget and Pair Again

If they still do not connect, I will select the headphones in Bluetooth settings, choose “Forget/Remove device,” and pair them again.

Step 6 – Restart Devices

Finally, I would restart both the phone and headphones and try the Bluetooth connection again.

Step 7 – Check Audio Output

After connecting, I would play some audio and check that the headphones are selected as the phone's audio output.

External Webcam Troubleshooting

- **Check the USB Connection**

Make sure the webcam is properly connected to the USB port. I would also try another USB port if needed.

- **Check Device Manager**

I would open Device Manager and check whether the webcam appears under **Cameras** or **Imaging devices**.

- **Check Camera Privacy Settings**

I would open Windows Privacy settings and make sure camera access is turned on.

- **Check Zoom Camera Settings**

In Zoom settings, I would check whether the correct external webcam is selected.

- **Check App Permissions**

I would make sure Zoom has permission to access the camera.

- **Restart and Test the Webcam**

Finally, I would restart the PC and test the webcam again using the Windows Camera app or zoom.

Troubleshooting an Offline Printer

Step 1 – Check the Printer

First, I would check that the printer is switched on and properly connected to the PC.

Step 2 – Open Printer Settings

I would open Windows Settings and go to **Devices → Printers & scanners**. Then I would select the printer that is showing as offline.

Step 3 – Run the Troubleshooter

I would select the printer and use the available

Troubleshooter option to start checking for problems.

Step 4 – Check the Results

The troubleshooter checks common problems such as connection, printer settings and driver-related issues.

Step 5 – Follow the Suggested Fixes

If Windows finds a problem, it shows the issue and may suggest a solution. I would follow the instructions provided by Windows.

Step 6 – Test the Printer

After applying the suggested fix, I would check the printer status again and print a test page.

Information provided by the Troubleshooter:

The troubleshooter can show which problem was detected and whether Windows was able to fix it automatically or if further action is needed.
