

Connecting and testing a USB Webcam

Step 1 – Connect the Webcam

I connected the USB webcam to an available USB port on the computer.

Step 2 – Install the Driver

I checked if the webcam driver was required. Windows installed the required driver automatically.

Step 3 – Open the Camera App

I opened the default **Camera** app in Windows and selected the USB webcam.

Step 4 – Check the Video

The webcam video appeared in the Camera app, so I checked that the image was clear and working properly.

Step 5 – Capture a Photo

Finally, I used the Camera app to capture a

photo and confirmed that the webcam was working correctly.

Setting Up and Testing a printer

Step-1- connect the printer

I connected the printer to the computer using a USB cable and switched the printer on.

Step 2- install the driver

I checked for the correct printer driver and installed it so that windows could communicate with the printer.

Step 3- add the printer

I opened setting- devices –printers & scanners and added the connected printer

Step 4- check the printer

I checked the printer status to make sure it was connected and ready to use.

Step 5-print a test page

Finally, I printed a test page to confirm that the printer was installed and working correctly.

Troubleshooting a Printer Not Detected

Step 1 – Disconnect the Printer

First, I unplugged the printer's USB cable from the computer to simulate a connectivity problem.

Step 2 – Check Device Manager

I opened **Device Manager** and checked for the printer under the available device categories. I also looked for any error or warning icon.

Step 3 – Reconnect the USB Cable

I connected the printer's USB cable again and made sure it was properly connected.

Step 4 – Scan for Hardware Changes

In Device Manager, I selected **Scan for hardware changes** so Windows could detect the printer again.

Step 5 – Check the Printer

I checked Device Manager and Windows printer settings to confirm that the printer was detected without an error.

Step 6 – Test the Printer

Finally, I checked the printer status and printed a test page to confirm that the connection was working.

Troubleshooting Webcam Issues in Zoom

Step 1- check the camera app

First i would open the windows camera app and check that the webcam is working properly there.

Step 2- close other apps

I would close the Camera app and any other application that may be using the webcam.

Step 3 – Check Zoom Camera Settings

I would open Zoom settings and go to the

Video section. Then I would select the correct webcam from the camera list.

Step 4 – Check Camera Permissions

I would open Windows Privacy settings and make sure camera access is enabled for apps and zoom.

Step 5 – Restart Zoom

I would completely close Zoom and open it again to check if the webcam video appears.

Step 6 – Test the Webcam

Finally, I would start a Zoom test meeting and confirm that the webcam video is displayed correctly.

Result:

After checking the camera settings,

permissions, and other apps, the webcam should work correctly in Zoom as well as the Windows Camera app.
