

GPU Identification

- **GPU Brand:** Intel
- **GPU Type:** Integrated
- **GPU Model Number:** Intel HD Graphics 530

Description:

Intel HD Graphics 530 is an integrated GPU built into the Intel Core i5-6500 processor. It handles the display, videos and basic graphics without needing a separate graphics card.

Cooling Systems Theory

feature	Air cooling	Liquid cooling
cost	Usually cheaper	usually more expensive
Cooling Efficiency	good for normal gaming pc	Better for high-performance system
Maintenance	Easy and low Maintenance	Needs more care
Installation	Easy to install	More difficult to install
Components	Fan and heatsink	Radiator, pump, tubes and coolant

Air cooling is simple, affordable, and easy to maintain. Liquid cooling is more expensive and complex, but it can provide better cooling for high-performance systems.

Cooling System for Gaming PC

I would choose liquid cooling for my gaming PC because I want to stream IPL matches and play graphics-heavy games. These activities can keep the PC under load for a long time, so good cooling is important. Liquid cooling can provide good cooling performance for a high-performance system. It is more expensive than air cooling, but I would choose it if my budget allows
