

Network Fundamentals and Building Networks

Introduction to Networks

Task 1: How My Phone Connects to Instagram

NETWORK DIAGRAM: How Data Travels to Instagram

Flow: Phone → Wi-Fi Router → ISP → Internet → Instagram Server

Phone – User Device

Wi-Fi Router – Connects the device to the network

ISP – Internet Service Provider

Instagram Server – Stores and sends Instagram data

Task 2: 5 Network Devices

Device	Network
Smartphone	WAN / Wi-Fi
Laptop	LAN / WAN
Smart TV	LAN / Wi-Fi
Smartwatch	PAN
Wi-Fi Router	LAN / WAN

Internet vs Intranet

Internet: A public network that anyone can access.

Example: using college Wi-Fi to open Google or Instagram.

Intranet: A private network used inside an organization. Example: a college internal portal that only students and staff can access.

Task 4: How WhatsApp Search Works

When I search something on WhatsApp, my phone sends the request through Wi-Fi or mobile network. The request travels through the ISP and Internet to the WhatsApp server.

The server processes the search and finds the required data.

The result is sent back through the Internet to my phone.

Finally, the result is displayed in the WhatsApp app.
